# Indoor Seating Upholstery Options

## Why choose **upholstered chairs** for your restaurant?

**Comfort** is paramount when it comes to restaurant seating. A well-designed chair can make the difference between a pleasant dining experience and an uncomfortable one. Comfort in seating primarily revolves around seat design, support, and ergonomics. Chairs with adequate padding, supportive backrests, and ergonomic design can significantly enhance guest comfort.

**Stylish** and unique chairs and barstools reinforce a restaurant's brand identity, leaving a lasting impression on customers. Utilize customization options for seating, including color choices and fabric types, to create a unique and cohesive look for your restaurant that fits your brand.

# What to know about vinyl grades.

## Grade 2 Vinyl

bfnseating.com

## GRADE 2 VINYL

Grade 2 vinyl is the base option, used for general purpose applications where budget considerations are important.

**Abrasion Resistance:** Suitable for light to medium traffic areas with a minimum of 50,000 double rubs.

**Lightfastness:** Standard lightfastness, adequate for indoor use with moderate sunlight exposure.

## GRADE 3 VINYL

Grade 3 vinyl offers an upgrade from the base level, providing better performance and additional features.

**Abrasion Resistance:** High abrasion resistance with 100,000 double rubs, suitable for high-traffic areas.

**Lightfastness:** Excellent colorfastness with a rating of 1,000 hours, ensuring durability in sunlight.

## GRADE 4 VINYL

Grade 4 vinyl is the highest grade available, offering superior performance and the most advanced features.

**Abrasion Resistance:** Maximum abrasion resistance, tested to between 100,000 and 1,500,000 double rubs, depending on the style.

**Lightfastness:** Superior resistance for prolonged exposure to sunlight without significant fading.
